LinkedIn

Version: 1.0

Executive Summary

This portfolio case study proposes a centralized Inventory Management System for a fictional retail company to replace spreadsheet-based inventory tracking.

Document Control

Version 1.0

Status: Draft

Prepared by: Adveidh Krishna

Project Background

ABC Retail Ltd. operates five branches and manages stock manually using spreadsheets.

Business Problem

Manual processes create inaccurate stock counts, delayed purchasing, duplicate records, and limited visibility.

Business Objectives

Improve inventory accuracy, automate alerts, reduce stock-outs, improve reporting, and increase operational efficiency.

Project Scope

In Scope: Products, Suppliers, Warehouses, Purchase Orders, Reporting.

Out of Scope: Payroll, Accounting, CRM.

Stakeholders

Executive Sponsor

Operations Manager

Warehouse Manager

Procurement Officer

Finance Team

IT Administrator

Stakeholder Matrix (RACI)

Responsible: Warehouse Manager

Accountable: Operations Manager

Consulted: Procurement & Finance

Informed: Store Managers

Current Process (As-Is)

Supplier → Warehouse → Manual Excel Update → Manager Review → Purchase Order.

Future Process (To-Be)

Supplier → Goods Receipt → Automatic Inventory Update → Low Stock Alert → Purchase Order Approval.

Business Rules

Unique SKU, non-negative inventory, approval required for purchase orders, audit logging.

Assumptions

Stable internet, trained staff, centralized database.

Constraints

Budget, timeline, existing hardware.

Functional Requirements

FR-001: The system shall support inventory function 1.

FR-002: The system shall support inventory function 2.

FR-003: The system shall support inventory function 3.

FR-004: The system shall support inventory function 4.

FR-005: The system shall support inventory function 5.

FR-006: The system shall support inventory function 6.

FR-007: The system shall support inventory function 7.

FR-008: The system shall support inventory function 8.

FR-009: The system shall support inventory function 9.

FR-010: The system shall support inventory function 10.

FR-011: The system shall support inventory function 11.

FR-012: The system shall support inventory function 12.

FR-013: The system shall support inventory function 13.

FR-014: The system shall support inventory function 14.

FR-015: The system shall support inventory function 15.

FR-016: The system shall support inventory function 16.

FR-017: The system shall support inventory function 17.

FR-018: The system shall support inventory function 18.

FR-019: The system shall support inventory function 19.

FR-020: The system shall support inventory function 20.

FR-021: The system shall support inventory function 21.

FR-022: The system shall support inventory function 22.

FR-023: The system shall support inventory function 23.

FR-024: The system shall support inventory function 24.

FR-025: The system shall support inventory function 25.

FR-026: The system shall support inventory function 26.

FR-027: The system shall support inventory function 27.

FR-028: The system shall support inventory function 28.

FR-029: The system shall support inventory function 29.

FR-030: The system shall support inventory function 30.

FR-031: The system shall support inventory function 31.

FR-032: The system shall support inventory function 32.

FR-033: The system shall support inventory function 33.

FR-034: The system shall support inventory function 34.

FR-035: The system shall support inventory function 35.

FR-036: The system shall support inventory function 36.

FR-037: The system shall support inventory function 37.

FR-038: The system shall support inventory function 38.

FR-039: The system shall support inventory function 39.

FR-040: The system shall support inventory function 40.

Non-Functional Requirements

NFR-01: Requirement 1 covering security, performance, availability or usability.

NFR-02: Requirement 2 covering security, performance, availability or usability.

NFR-03: Requirement 3 covering security, performance, availability or usability.

NFR-04: Requirement 4 covering security, performance, availability or usability.

NFR-05: Requirement 5 covering security, performance, availability or usability.

NFR-06: Requirement 6 covering security, performance, availability or usability.

NFR-07: Requirement 7 covering security, performance, availability or usability.

NFR-08: Requirement 8 covering security, performance, availability or usability.

NFR-09: Requirement 9 covering security, performance, availability or usability.

NFR-10: Requirement 10 covering security, performance, availability or usability.

NFR-11: Requirement 11 covering security, performance, availability or usability.

NFR-12: Requirement 12 covering security, performance, availability or usability.

NFR-13: Requirement 13 covering security, performance, availability or usability.

NFR-14: Requirement 14 covering security, performance, availability or usability.

NFR-15: Requirement 15 covering security, performance, availability or usability.

User Stories

As a user, I want capability 1 so that business operations are improved.

As a user, I want capability 2 so that business operations are improved.

As a user, I want capability 3 so that business operations are improved.

As a user, I want capability 4 so that business operations are improved.

As a user, I want capability 5 so that business operations are improved.

As a user, I want capability 6 so that business operations are improved.

As a user, I want capability 7 so that business operations are improved.

As a user, I want capability 8 so that business operations are improved.

As a user, I want capability 9 so that business operations are improved.

As a user, I want capability 10 so that business operations are improved.

As a user, I want capability 11 so that business operations are improved.

As a user, I want capability 12 so that business operations are improved.

As a user, I want capability 13 so that business operations are improved.

As a user, I want capability 14 so that business operations are improved.

As a user, I want capability 15 so that business operations are improved.

As a user, I want capability 16 so that business operations are improved.

As a user, I want capability 17 so that business operations are improved.

As a user, I want capability 18 so that business operations are improved.

As a user, I want capability 19 so that business operations are improved.

As a user, I want capability 20 so that business operations are improved.

Acceptance Criteria

AC-01: Feature 1 meets expected business outcome.

AC-02: Feature 2 meets expected business outcome.

AC-03: Feature 3 meets expected business outcome.

AC-04: Feature 4 meets expected business outcome.

AC-05: Feature 5 meets expected business outcome.

AC-06: Feature 6 meets expected business outcome.

AC-07: Feature 7 meets expected business outcome.

AC-08: Feature 8 meets expected business outcome.

AC-09: Feature 9 meets expected business outcome.

AC-10: Feature 10 meets expected business outcome.

AC-11: Feature 11 meets expected business outcome.

AC-12: Feature 12 meets expected business outcome.

AC-13: Feature 13 meets expected business outcome.

AC-14: Feature 14 meets expected business outcome.

AC-15: Feature 15 meets expected business outcome.

Gap Analysis

Current state relies on spreadsheets; future state uses centralized real-time inventory.

Risk Register

Risk: Data migration

Mitigation: Validation and backups.

Risk: User resistance

Mitigation: Training.

Requirements Traceability Matrix

Objective 1 -> FR-001 to FR-010

Objective 2 -> FR-011 to FR-020

Objective 3 -> FR-021 to FR-040

Test Scenarios

TS-01: Validate business scenario 1.

TS-02: Validate business scenario 2.

TS-03: Validate business scenario 3.

TS-04: Validate business scenario 4.

TS-05: Validate business scenario 5.

TS-06: Validate business scenario 6.

TS-07: Validate business scenario 7.

TS-08: Validate business scenario 8.

TS-09: Validate business scenario 9.

TS-10: Validate business scenario 10.

TS-11: Validate business scenario 11.

TS-12: Validate business scenario 12.

TS-13: Validate business scenario 13.

TS-14: Validate business scenario 14.

TS-15: Validate business scenario 15.

Reporting Requirements

Inventory valuation, low stock, stock movement, supplier performance.

Future Enhancements

Barcode scanning, RFID, mobile app, predictive inventory forecasting.

Glossary

BRD, SKU, RTM, KPI, RACI, UAT.

Appendix

This document is a fictional portfolio case study created for demonstration purposes.
